

About Me

Aspiring web developer with hands-on experience in creating dynamic and responsive websites using modern technologies. Passionate about learning and applying new skills to solve real-world problems. Eager to gain experiences across different fields and continuously improve. Currently focusing on front-end development with plans to expand into full-stack development and app creation.

Roumaissa Hadibi

Front-End Developer

Education

CURRENT STUDIES:

Second Year Computer Science, USTHB

Projects

- card design
- food website
- plants website
- calculators
- average system
- indie games

WEB DEVELOPMENT:

I worked on creating websites using html, css and javascript. experienced in building responsive, user-friendly websites with a focus on clean design and functionality. Constantly learning and exploring new technologies to enhance my web experiences and take to the next level to the backend.

GAMES DEVELOPMENT:

I started game development by creating a game called "2048" using C language and SDL, and then I dived deeper into the game industry and created a classic game called "asteroids" using a game engine GameMaker. I am currently creating games using Lua languages and LOVE2D framework.

EXPERIENCE (ONGOING):

from 2023 to now, I am able to develop fully functional frontend websites using HTML, CSS and JAVASCRIPT, with a strong understanding of responsive design. Currently expanding skills in NODE.JS, PYTHON, JAVA and SQL to transition into full-stack development. Experienced in version controls (GIT/GITHUB) and continuously improving problem solving and coding efficiency.
